Dear 7<sup>th</sup> Grade Science Students,

For this letter I want you to think about all the different types of energy that we have learned about - fossil fuels, alternative energy and renewable energy sources. Think about what type of energy source (or sources) you think would be the BEST for the earth to use. For this week I want you to write me a letter from **fifty years in the future**. (Let's assume I am still alive.☺) I want you to describe what they world is like the future and what types of energy are being used. Make sure to think about all the advantages and disadvantages of each and include them in your letter. Also describe to me how Southfield and life has changed using this new energy. Get creative. Also include a drawing of what the Southfield looks like in the future. Make sure to include lots of science vocabulary and do quality work.

Your job is to respond to the letter by the next Monday. Each letter is worth 20 points and will count as a quiz grade. You will be graded on the **quality** of your letter. Even though this is not an English class, I expect you to use proper grammar and spelling. Because this is a Science class, I expect all science information to be correct.

Include the five parts of a letter (heading, greeting, body, closing, and signature). You can type your letter or write it by hand. If you would like to type your letter and then email it to me as an attachment my email is: [christina.cardinal@southfieldk12.org](mailto:christina.cardinal@southfieldk12.org)

I look forward to your letter!

Sincerely,

Ms. Cardinal
